

OBSTETRICAL ULTRASOUND

Follow Up Growth

If a full anatomical survey was performed at 18 weeks or later by SRC, Salem Hospital, SH MFM or Salem Clinic and all anatomy seen and normal, then the following should be evaluated:

Fetal Biometry:

BPD, HC, AC & FL

Head:

Lateral ventricle with measurement

Cerebellum

Profile w/nasal bone

Upper lip if not well seen on previous exam

Heart:

Four-chamber view

Right ventricular outflow tract

Left ventricular outflow tract

Interventricular septum

Heart rate

Abdomen:

Stomach

Diaphragm

Kidneys (Long/Coronal & Transverse)

Bladder

In addition document fetal lie, placenta, AFI (if ≥ 30 wks) & measure cervix up to 28 weeks unless Hx of preterm labor than up to 32 weeks.

If fetal weight percentile is $\leq 20\%$ perform umbilical cord Doppler.
